

The i-Stick

made by **OPTRON**

The i-Stick provides a new dimension in versatility and mobility. Weighing less than four pounds, it travels easily from classroom to classroom and from building to building. It can be used with a laptop and with a monitor.

Equipped with a top quality color camera, the i-Stick provides excellent magnification at the desk in the small classroom as well as at the board in the large auditorium.

OPTRON's TwistCam technology offers a unique flexibility in camera positioning: The picture on the screen is always leveled and upright, at any angle, for left-handed as well as for right-handed users.

The i-Stick does not drain the laptop's power source. It is independently powered by its own exchangeable battery. It comes with video-streaming and screen-shot software.

The i-Stick's swivel arm folds for easy packing, ...

... sits at an angle for a large magnification area ...

... and can be straightened to a very high camera position for a better view of the blackboard and a 360 degree surround view.
